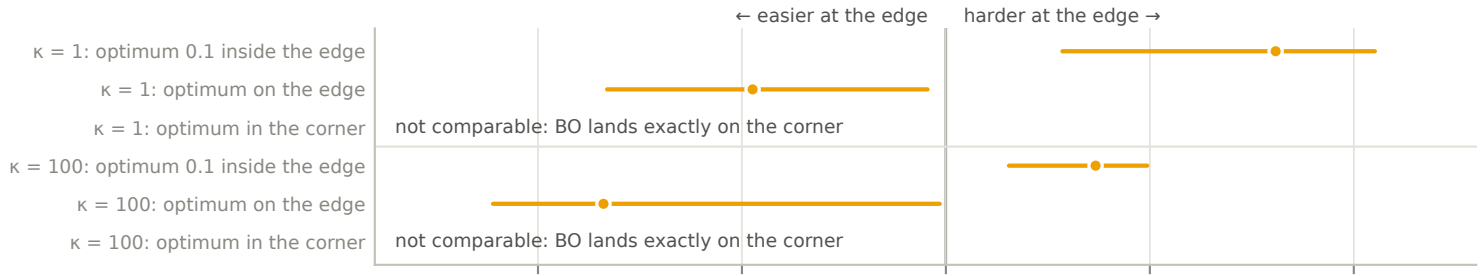
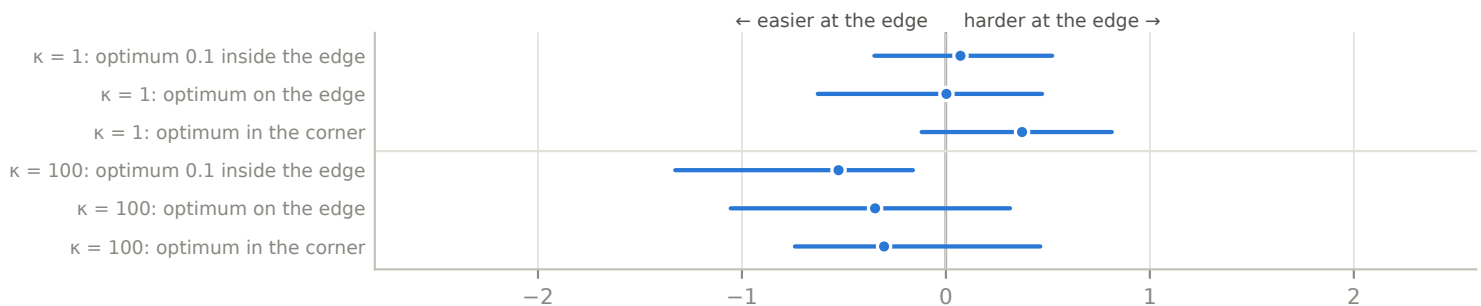
E4. Optimum at the box edge: 2-D aligned, 15 instances, paired.
Dot = median difference; bar = 95% bootstrap interval; a bar crossing 0 = no clear difference.

BO (ARD kernel), searches only inside the box



+1.62	**harder at the edge**	9% of evals on the edge
−0.95	**easier at the edge**	8% of evals on the edge
hits f = 0 in 100% of runs		**(3% of evals on the edge)**
+0.73	**harder at the edge**	14% of evals on the edge
−1.68	**easier at the edge**	12% of evals on the edge
hits f = 0 in 93% of runs		**(4% of evals on the edge)**

CMA-ES (full), no box handling



+0.07	no clear difference	24% of evals outside the box
+0.00	no clear difference	46% of evals outside the box
+0.37	no clear difference	63% of evals outside the box
−0.53	**easier at the edge**	32% of evals outside the box
−0.35	no clear difference	50% of evals outside the box
−0.30	no clear difference	59% of evals outside the box
